DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "block 236 in Fig. 2" has been used to designate both AGC and amplifier. Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

2. Claim 1, 5, 9, and 13 are objected to because of the following informalities: the phrase: "signal values the values of their corresponding dither signal" should be changed to -- signal values and the values of their corresponding dither signal --. Appropriate correction is required.

3. Claim 5 is objected to because of the following informalities: on line 2, the phrase: "into portions a communications signal" should be changed to -- into portions of a communications signal --. Appropriate correction is required.

Art Unit: 2634

4. Claim 9 is objected to because of the following informalities: on line 4, the phrase: "measuring the performance" should be changed to -- measuring a performance--. Appropriate correction is required.

Allowable Subject Matter

5. Claims 1-19 are allowed.
6. The following is a statement of reasons for the indication of allowable subject matter:

None of the prior art teaches or suggests that an adaptive controller or equalizer comprises a dither signal generator to generate a sequence of uncorrelated signals; measure and store signals; correlating dither sequence; integrate each of the sequences; and update signals by addition or subtraction depending upon the value of the corresponding integrated correlator output.

Claims 1-19 would be indication of allowable if overcome the claim objections described above.

Conclusion

7. This application is in condition for allowance except for the following formal matters:

See description above.
